

## Management.Services 'sweb.Report'

Reports – clear  
and to the point

sweb.Report is the central reporting solution for all your car parks. With sweb.Report you can manage and optimize your business by consolidating your data from several car parks into informative and graphical reports.

### Everything at a glance

Compare the key figures of all your facilities in a ready-consolidated report. The manual consolidation of data from different facilities is no longer necessary.

### Well informed - always and everywhere

Overall reports covering multiple car parks put the information you need at your fingertips – whenever and wherever you need them. All it takes is an internet connection – no need for extra software.

### Clear and easy to understand

Clear graphics provide a quick overview of current operations. You can view key performance indicators and determine which of your products have the best sales figures and which car parks are the most profitable.

### Easy to customize

Easily individualize your reports: The reporting package contains all the important reporting tools. You decide what format and graphics on which reports are needed for your business.

## Features

### Business analysis

- Performance reports, statistical analyses and system event reports: you decide which data analyses to include to suit your business needs.

### Parameters and Drill-Down

- Flexible parameters allow you showing customized reports. The Drill-Down option allows you navigating easily through the data structures. Switch e.g. from revenue per car park to revenue per automatic payment machine within one click.

### Export

- You can always export your evaluations and reports to various common file formats (PDF, HTML, Microsoft Excel, Plain Text, RTF, XML, PostScript, DHTML Result) for further processing. Graphic charts and diagrams can be saved to GIF files.

### Automatic e-mail delivery

- You can plan to send reports via e-mail on an automated schedule.

### Scheduling

- Time scheduled report generation ensures efficient reporting and allows for periodic publication of HTML formatted reports and task planning.

### Report types

- Revenue Reports  
This lets you analyze your revenue statistics based on a variety of criteria, providing instant answers to questions such as: Which products are our top sellers? Which car park generates the most revenue? Did your revenue boosting measures achieve the desired result?
- Movement Reports  
Analyze the utilization of your facilities using reports that focus specifically on parking duration, passages and occupancy levels.  
Identify arrival peak times and find out the number of manual gate overrides granted by your staff.

## Standard Version

- Dashboard (revenue, occupancy and system events overview per car park)

### Sales reports

- Fee Group Analysis
- Validation Report
- Shift Report
- Payment Method Report
- Car Park Balance Sheet
- Actual Payment Transactions Statistics
- Revenue report
- Payment Revenue Statistics
- Net Revenue Report
- Sales Report

### Movement reports

- Passages Statistics
- Parking Duration Statistics
- Occupancy Statistics
- Parking Transactions

### System event reports

- System Totals Report (system events, passages)
- System Events

## Bookable option

- Flexible revenue reporting: Create your own reports using a broad range of revenue related data.
